

AI-driven research, strategy, creative for intelligent healthcare teams

Built to enable teams. Designed to shape decisions. Proven to deliver real-world impact.

We combine AI-driven research, strategy, and creative engagement with behavioural science, using our connected system to translate insight into action with patients and professionals.

Our ***Connected Behavioural Intelligence System***[™] interrogates real-world data at speed, using our AI platform to model how decisions are made, enabling us to rapidly design and deploy interventions that change behaviour across patients and professionals.

Intelligence

(behavioural insight + research)

Strategy

(decision + intervention design)

Engagement

(creativity + experience)

Systems

(AI + connected modelling)

Connected Behavioural Intelligence System[™]

[About](#)[Expertise](#)[Work](#)[Request Demo](#)

**The most powerful force in healthcare isn't data.
It's behaviour.**
If behaviour doesn't change, nothing does.

Behavioural Research and Intelligence

Uncover how decisions are really made using AI-driven research, behavioural science, and real-world data to identify barriers, motivations, and opportunities.

Launch Strategy - Optimisation and Validation

Translate behavioural insight into impact on how global strategy will land in markets design that help teams influence creating a beach.

Journey Mapping and Behaviour Modelling

Model patient + professional behaviours, influences, moments that matter - through our connected system, enabling faster analysis, smarter decisions.

Creative Engagement and Experience Design

Design experiences, campaigns, and content that shape how people think, feel, and act across patient and healthcare professional journeys.

Behaviour Change Activation

Turn insight into action through scalable programme, and tools designed to target specific triggers to shift behaviour across teams, patients, and systems.

Performance and Outcome Optimisation

Measure, refine, and optimise interventions in real time, ensuring continuous improvement and sustained impact on behaviour and health outcomes.

[LAUNCH STRATEGY](#)[GLOBAL](#)

Validating strategy through patient lens of real-world experience

Clinical advantage doesn't always translate into perceived value.

We analysed patient and physician perspectives to identify where the strategy works, where it creates friction, and what's needed to ensure adoption.

[Request case presentation](#)

Launch Strategy Optimisation / Validation

Translating behavioural insight into how global strategy lands in markets.

Objective

Understand how global asthma strategy will be experienced in real-world settings, identifying where patient behaviour may accelerate or delay adoption.

Techniques

Behavioural Evidence Synthesis
Systematic consolidation of 45+ global local data sources, including, research reports, brand plans, medical strategy, patient journeys, and advisory boards.

Behavioural Intelligence Modelling
AI-enabled thematic analysis and TDF-based behavioural coding to identify decision drivers, barriers, country archetypes, and priority patient segments.

Role of AI

Accelerated pattern recognition across large, complex datasets, enabling structured behavioural analysis, rapid synthesis, and consistent identification of key intervention points.

Deliverables

Mitigation blueprint, behavioural insight framework, and two-stage workshops to align leadership and refine targeted intervention strategies.

Impact

Revealed critical gaps between strategy assumptions and patient reality, including normalisation of symptoms and delayed escalation, shaping where strategy would succeed or stall.

Aligned global and regional teams on priority actions, enabling focused investment to support adoption and unlock early growth.

Outcome

Strengthened strategy execution by ensuring it is behaviourally viable, not just clinically robust, across markets.

[JOURNEY MAPPING](#)[GLOBAL](#)

Designing patient support through real-world behaviour and experience

Clinical pathways don't always reflect how patients live with treatment. We mapped patient behaviours, influences, and moments that matter to define where support is needed, where friction occurs, and how to enable confident adoption at home.

[Request case presentation](#)

Translating Journey Mapping and Behaviour Modelling

Designing patient support through real-world behaviour and experience

Objective

Enable the successful global launch of home self-injection for a rare disease treatment by understanding how patients and professionals behave across the treatment journey.

Techniques

Behavioural Evidence Synthesis
Integration of secondary research, PSP materials, stakeholder inputs, and real-world journey data to define key moments, needs, and system dynamics.

Behavioural Intelligence Modelling
Mapping patient and HCP behaviours, influences, and decision points using behavioural frameworks, identifying moments that matter, barriers, and drivers across the journey.

Role of AI

Structured analysis of complex behavioural data to identify patterns across patient types, treatment stages, and markets - enabling faster, more consistent modelling of journeys and intervention points.

Deliverables

End-to-end patient experience map, PSP touchpoint architecture, and engagement blueprint to guide, design, and brief the global patient support programme.

Impact

Defined the critical moments and support needs required to transition patients from clinical to home administration — including training, confidence-building, and adherence support across cycles. Enabled alignment on how support should evolve from onboarding through to long-term independence.

Outcome

Delivered a behaviourally-led blueprint for patient support, ensuring the programme is built around how patients actually experience, adopt, and sustain treatment in real life.

Research

- Journey Mapping – deep mapping of patient, caregiver, and HCP experiences.
- Segmentation & Profiling – audience clustering and behavioural archotyping.
- Value Story Development – evidence-backed messaging and presentation design.
- Gap Analysis & Data Generation – identifying unmet needs and evidence opportunities.
- Behavioural Impact Modelling – predicting and measuring change drivers.
- Insight Mining – qualitative, quantitative, and social listening integration.
- KOL Behavioural Mapping – influence and advocacy analysis.
- Lexicon Development – patient and professional vocabulary frameworks.
- Evidence Generation – real-world evidence, registries, and qualitative case studies.
- Asset Validation Testing – message and creative testing with target audiences.
- Online Communities – patient, HCP, and mixed-stakeholder engagement platforms.

Strategy

- Brand Planning – long-range, lifecycle, and campaign-specific.
- Target/Product Profile Development – market shaping from early TPP stages.
- Brand Positioning & Messaging Strategy – informed by behavioural insights and audience needs.
- Patient & HCP Engagement Strategies – tailored to therapeutic and market dynamics.
- Competitive Intelligence & Market Shaping – mapping opportunities and differentiators.
- Therapeutic Area Opportunity Assessments – evidence-led growth identification.
- Launch Excellence – go-to-market frameworks, playbooks, and activation plans.
- Innovation Workshops – disease area hackathons and ideation sprints.
- KPI & Performance Frameworks – campaign measurement and optimisation strategies.
- Client Process & SOP Development – embedding best-practice methods in client teams.

Creative

- Pre-launch & Launch Campaigns – full creative development across assets, channels, and phases.
- Branding & Identity Systems – architecture, naming, visual identity, tone of voice.
- Messaging Platforms – branded, unbranded, and corporate; lexicon creation and narrative development.
- Disease Awareness Campaigns – unbranded patient, HCP, and public-facing initiatives.
- Branded Creative Campaigns – brand equity-driving concepts across global and local markets.
- Corporate & Franchise Campaigns – portfolio-wide positioning and storytelling.
- Congress & Event Experiences – booth design, interactive experiences, symposium creative.
- Sales & Engagement Tools – detail aids, sales narratives, modular content systems.
- Omnichannel & Multichannel Programmes – integrated journeys across digital and in-person touchpoints.
- Digital Product Development – apps, web platforms, and engagement tools.
